SUMMARY

Software Developer specializing in ASP.NET, C#, Python, React, and MySQL with experience building web and mobile/XR/desktop applications. Specialized in designing secure JWT-driven architectures and efficient data access layers using Dapper and Entity Framework. Focused on delivering clean, testable code and scalable solutions for complex, data-intensive applications.

PROFESSIONAL EXPERIENCE

Software Developer

September 2024 - November 2025

ETHEREAL Research Group

Calgary, AB

- Designed and developed an accessible VR training environment for non-speaking autistic users, enhancing interaction flow and ethical UX.
- Engineered backend systems to synchronize GPT-driven dialogue, user events, and multimodal sensory feedback in real time.
- Implemented AI-based behavioral analysis, boosting video processing speed by 90% and accuracy by 83%.
- Optimized performance and cut third-party API costs by 98% through adaptive frame rate control and efficient body-language delta analysis.

Software Developer - Protégé

September 2024 - March 2025

ELIXR & Illumia

Calgary, AB

- Delivered VR/AR solutions across 5 projects, integrating Unity, C, animation, AI, real-time audio, and WebXR to create immersive, interactive simulators.
- Built Retrieval-Augmented Generation (RAG) pipelines using Llama 3 and Ollama, enabling context-aware querying of domain-specific documents.
- Developed real-time audio streaming and AI-driven animation systems, automating workflows and reflecting user emotions accurately.
- Optimized Unity performance with profiling, GPU instancing, batching, occlusion culling, and WebSocket streaming; refactored codebases to scale efficiently.

Software Developer - Internship

February 2024 - August 2024

Telus

Calgary, AB

- Led development of a cross-platform multiplayer AR app for iOS and Quest, enabling real-time shared experiences for up to 50 users.
- Engineered NetCode and spatial anchor systems for accurate mapping, animation, and interactive AR workflows.
- Enhanced operational efficiency, reducing transportation costs by 40% through immersive remote instruction.

EDUCATION

University of Calgary

April 2024

Master of Software Engineering (GPA: 4/4.00)

Calgary, Canada

- Received full departmental graduate funding and international graduate tuition award.
- Nominated for the Best Graduate Project at the Distinguished Master's Thesis Award in STEM Disciplines.

University of Tehran

July 2020

B.Sc. in Computer Engineering (GPA: 17.24/20.00)

Tehran, Iran

- Received the best undergraduate project, and two Faculty of Engineering Fellowship Awards.

PROJECTS

Social Networking API | ASP.NET Core, MVC, REST APIs, MSSQL, Dapper, Entity Framework

- Built a full-stack backend using ASP.NET Core and MSSQL following MVC architecture, exposing RESTful APIs for user management with Swagger documentation.
- Implemented secure JWT authentication with password hashing/salting, token expiration, and role-based authorization for user and admin workflows.
- Designed a scalable data access layer using Dapper and Entity Framework, supporting complex relational queries, and real-time data persistence.

ETHEREAL Research Group - Coffee Shop Simulation | Unity, C#, .NET, AI, API, VR, SQL

- Developed a high-fidelity VR training environment for neurodivergent users, integrating multimodal sensory feedback and ethical UX design.
- Engineered a .NET backend to manage real-time application state and handle asynchronous API-driven communication between Unity and external LLMs.
- Integrated GPT-driven dialogue and ElevenLabs voice synthesis to facilitate adaptive, low-latency NPC interactions.
- Implemented a vision-AI pipeline to parse visual stimuli and procedurally generate decision-tree UIs for complex user workflows.

ETHEREAL Research Group - Multi Modal Behaviour Analysis | Python, AI, Azure, Unity, VR/AR

- Architected a cross-platform real-time inference system for Meta Quest 3 and mobile tablets, synchronizing multimodal inputs (Vision, Audio, Text).
- Engineered a Python-based serverless pipeline on Azure to offload GPU-intensive computation, enabling high-speed processing of large-scale data via custom chunking and streaming logic.
- Optimized data ingestion layers to handle concurrent multimodal streams, ensuring sub-second latency between headset input and AI-generated feedback.

ELIXR & Illumia - ATC | Unity, C#, Network, Optimization, VR, Python, RAG, API

- Engineered a Retrieval-Augmented Generation (RAG) pipeline utilizing Llama 3 and Ollama to facilitate real-time, context-aware querying of domain-specific ATC manuals.
- Developed a low-latency audio streaming and transcription pipeline in Python, achieving 86% accuracy in command extraction across diverse accents.
- Integrated deterministic NLP parsing to translate transcribed speech into automated system actions, reducing trainee manual workload during high-stress simulations.

SKILLS

Languages: C#, Python, C, C++, JavaScript, SQL

AI & Machine Learning: RAG Pipelines, Llama 3, OpenAI API, Multimodal Inference, NLP, Azure AI

XR & Systems: Unity, Meta Quest SDK, WebXR, NetCode (Multiplayer), Spatial Anchors, AR Foundation

Backend & Cloud: ASP.NET Core, MVC, RESTful APIs, Azure, Docker, Micro-ORMs (Dapper)

Databases: MS SQL, MySQL, PostgreSQL

Tools & Workflow: Git, Linux, LaTeX, Scrum/Agile, Jira, Confluence
